LOFTNESS

LOFTNESS SPECIALIZED EQUIPMENT, INC.
LIMITED WARRANTY POLICY

The limited warranty policy begins upon delivery of the unit to the original customer.

The following Loftness products have a two (2) year limited warranty;

XLB10 Grain Bag Loader, Battle Ax L-series Skid Steer, Battle Ax S-series Skid Steer, Battle Ax H-series Skid Steer, Battle Ax Excavator 20-series, Battle Ax Excavator 30-series, Battle Ax Excavator 40-series, Battle Ax Excavator 50-series, Battle Ax Extreme, Bad Ax Skid Steer, Timber Ax Skid Steer, Stump Ax, BT20, Kwik Cut.

All other Loftness products have a one (1) year limited warranty.

If any Loftness product is used as rental or leased equipment the limited warranty period is for only 30 days from the delivery date to the original customers.

Loftness Specialized Equipment, Inc. ("LOFTNESS") warrants new LOFTNESS machinery and/or attachments at the time of delivery to the original purchaser, to be free from defects in material and workmanship when properly set up and operated in accordance with the recommendations set forth in the LOFTNESS Operator's Manual. The second year of limited warranty includes only parts, and not labor.

LOFTNESS' liability for any defect with respect to accepted goods shall be limited to repairing the goods at an authorized dealer or other LOFTNESS designated location, or replacing them as LOFTNESS shall elect. The above shall be in accordance with LOFTNESS warranty adjustment policies.

WARRANTY REQUIREMENTS

Warranty registration form must be filled out and returned to Loftness Specialized Equipment to validate all warranty claims. To request a warranty claim, a return authorization from LOFTNESS must be obtained. The failed part may then be returned in an untampered status. This warranty does not include freight or delivery charges incurred when returning machinery for servicing. Dealer mileage, service calls and pick-up/delivery charges are the customer's responsibility.

LIMITATIONS OF WARRANTY

LOFTNESS products are designed to provide years of dependable service when proper use and maintenance is adhered to. The potential for misuse in many applications exists; therefore, a limited warranty is provided as follows.

This warranty shall not apply to any machine or attachment which shall have been repaired or altered outside the LOFTNESS factory or authorized LOFTNESS dealership or in any way so as in LOFTNESS' judgment, to affect its stability or reliability, nor which has been subject to misuse, negligence or accident, nor to any machine or attachment which shall not have been operated in accordance with LOFTNESS' printed instructions or beyond the company recommended machine rated capacity. LOFTNESS may elect to have an area representative evaluate the condition of the machine before warranty is considered.

In addition, this limited warranty provides no coverage for general wear or maintenance items, misuse, environmental conditions and/or contamination for which they were not designed or not intended, including but not limited to the following items;

Use of machine beyond its rated capacity, Conveyors, Improper knife replacement, Auger wear, Missing knives, Saw blades, Striking foreign objects, Brakes and brake pads, Lack of lubrication, Tires, Failures caused by running in an "out-of-balance" condition, Hydraulic hoses damaged by being caught in "pinch points" or by moving parts, and Damage caused by excessive force from the power unit.

EXCLUSIONS OF WARRANTY

Except as otherwise expressly stated herein, LOFTNESS makes no representation or warranty of any kind, expressed or implied. **The implied warranty of merchantability and fitness for a particular purpose are disclaimed, and excluded from this limited warranty.** The remedies set forth in this warranty are the sole and exclusive remedies available to any person under this warranty. LOFTNESS shall have no liability to any person for incidental, consequential or special damages of any description, whether arising out of express or implied warranty or any other contract, negligence, or other tort or otherwise. This exclusion of consequential, incidental and special damages is independent from and shall survive any finding that the exclusive remedy failed of its essential purpose. Upon purchase, the buyer assumes all liability, all personal injury and property damage resulting from the handling, possession or use of the goods by the buyer.

No agent, employee or representative of LOFTNESS has any authority to bind LOFTNESS to any affirmation, representation or warranty concerning its machinery and/or attachments except as specifically set forth herein. (October 2025)

LOFTNESS

To the Dealer:

In order to ensure compatibility / performance of the Loftness attachment and the customer's power unit, it is IMPERATIVE that this Pre-Delivery Inspection ("PDI") be completed using the customer's actual power unit.

PRE-DELIVERY INSPECTION

Dealer: By initialing each line I understand and promise that I have completed the following:

____ Verified the attachment is set up properly for customers power unit. (check model code with manual)

____ Greased all grease zerks till grease purges out of bearing.

____ Removed all shipping brackets.

_____Adjusted push bar out of shipping position. (if equipped) (full forward position recommended)

____ Installed head on customer's unit that will be running the attachment and set hydraulic flow per power unit manufacturer owner's manual for preferred flow.

____ Recorded the Serial Number / Make / Model of the power unit.

Power unit. S/N _____ Make _____ Model _____GPM_____

____ Recorded the Serial Number and Model of the Loftness attachment. S/N _____ Model_____

____ Verified power unit manufacturer outlined Auxiliary coupler orientation for pressure, return & case drain line.

____ Verified/recorded rotor RPM at full throttle per model & chart in Loftness owner's manual. RPM _____

____ Performed an Auxiliary system pressure stall check on the power unit only and verified that max pressure rating is achieved per power unit manufacturer specifications. Recorded pressure observed _____ PSI

PDI completed by: _____ Print

_____ Signed/Date

Contact Loftness factory if any of the tests are not within power unit or Loftness specifications.

DELIVERY

____ Showed customer all grease zerks.

____ Showed customer adjustable push bar options. (if equipped)

____ Showed customer how to properly engage hydraulics to operate attachment.

____ Reviewed owner's manual, all on-product warnings and instructions, and safe operation with customer.

____ Assisted customer with completing / submitting Warranty Registration Form to Loftness by one of the below options.
Dealer also needs to submit a copy of this completed PDI to Loftness and maintain the copy in owner's manual for unit.

Mail to:
Loftness Specialized Equipment
PO Box 337
Hector, MN 55342

Delivered to Customer by: _____Print

_____Signed/Date

Email to: registration@loftness.com

Ordering Code

Battle Ax Skid Loader (Example)

The ordering code will consist of two numbers (machine size), two letters (machine type), one letter (tooth type), two numbers (motor system), one letter (sprocket/belt combo), one number (threshold setting), and one letter (options). An example for a Battle Ax of this type would be as shown below.

61BSS44T1.F

SIZE
61 = 61" Cut
71 = 71" Cut

TYPE
BS = Battle Ax Skid Loader

TOOTH
Q = Quadco Planer
H = Hard Surface
S = Standard Double Carbide

MOTOR SYSTEM
66 = Parker Fixed Displacment
44 = Parker Variable Displacement Without Brake
45 = Parker Variable Displacement Closed Loop Flushing
67 = Parker Variable Displacement With Brake

SPROCKET / BELT COMBO
T = 50/35 37MM 1568 - Standard Speed
A = 48/38 37MM 1568 - Standard Speed
B = 45/40 37MM 1568 - Standard Speed
D = 45/43 37MM 1568 - Standard Speed
H = 43/45 37MM 1568 - Standard Speed
I = 40/45 37MM 1568 - Standard Speed
J = 40/48 37MM 1568 - Standard Speed
T = 50/35 37MM 1568 - High Speed
U = 48/37 37MM 1568 - High Speed
V = 48/40 37MM 1568 - High Speed
D = 45/43 37MM 1568 - High Speed
H = 43/45 37MM 1568 - High Speed
I = 40/45 37MM 1568 - High Speed
E = 40/36 20MM 1400 Not Available Over 85HP
F = 38/38 20MM 1400 Not Available Over 85HP
G = 33/38 20MM 1400 Not Available Over 85HP

THRESHOLD SETTING
0 = Setting
1 = Setting
2 = Setting
3 = Setting
4 = Setting
5 = Setting

OPTION
F = Right Hand Hose Conversion 4000PSI
V = Right Hand Hose Conversion 6000PSI
L = Liner

LOFTNESS

Owner Information

Thank you for your decision to purchase a Battle Ax skid loader-mounted shredder from Loftness. To ensure maximum performance of your machine, it is mandatory that you thoroughly study the owner's manual and follow its recommendations. Proper operation and maintenance are essential to prevent injury or damage and to maximize machine life.

The Loftness Battle Ax is an effective, reliable machine used for maintaining grass, weeds, brush and trees. Efficiently cuts and mulches up to 6" diameter material. Intermittently cuts larger diameter material. For best results, operate the machine as low to the ground as possible without the teeth striking ground or other obstructions. Lifting or tilting the Battle Ax increases the risk of flying debris. Because of the high speed of the teeth, the life of the teeth will be reduced if it is operated in rocky terrain or in areas where many obstacles are present. Areas to be mowed should be free of debris such as rocks, bottles, large branches etc. The teeth cut and pulverize the grass, weeds and brush. The Battle Ax deposits cut material over the entire width-of cut, which eliminates bunching or windrowing behind the machine.

Operate and maintain this machine in a safe manner and in accordance with all applicable local, state, and federal codes, regulations and/or laws, and in compliance with on-product labeling and these instructions.

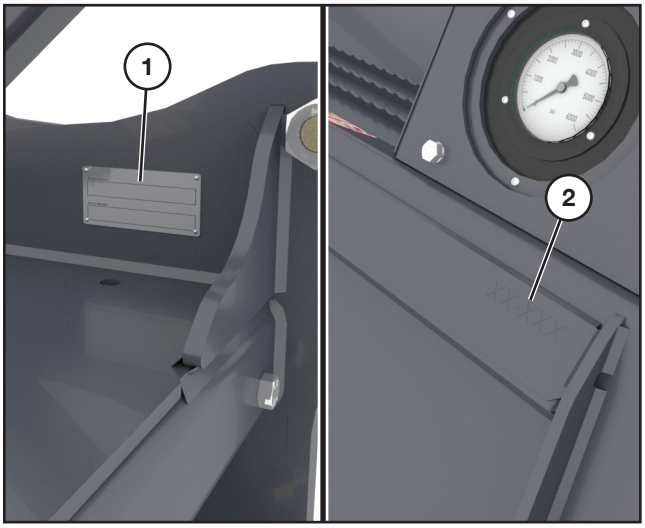
Make sure that all personnel have read this owner's manual and thoroughly understand safe and correct operating, installation and maintenance procedures.

Continuous improvement and advancement of Loftness products may result in changes to your equipment that may not be reflected in this publication. Loftness reserves the right to make product improvements to the machine at any time. Although great care has been taken to ensure the accuracy of this publication, Loftness does not assume any liability for errors or omissions.

Warranty Policy

Be sure to read and understand the Warranty Policy at the beginning of this manual. It is also important that you fill out the Warranty Registration form(s) completely with your dealer so as not to void the warranty.

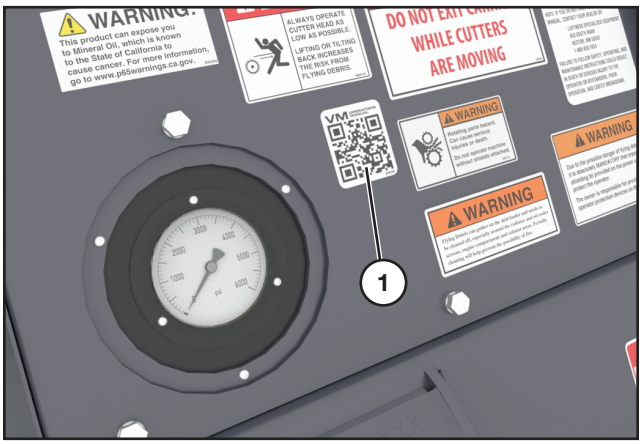
Serial Number Location



The machine serial number is shown in the tag (1), and is also stamped into the frame (2) on the skid steer mounting bracket.

Always use your model and serial number when requesting information or when ordering parts.

Owner's Manual Access



The Battle Ax is shipped with a printed owner's manual. The manual must be available for all operators. Keep in a safe, dry location.

To access a digital owner's manual, use a smart phone to scan the QR Code (1) located on the motor cover. This code will link to the Battle Ax owner's manual on the Loftness website.

Battle Ax Features

- Downward Rotation Design
- Premium Strength Steel Body & Rotor
- Front Mounted
- Hydraulic Driven
- Universal Skid-Loader Mount
- Adjustable Tree Pusher
- Claw Hooks On Tree Pusher
- 17 in. (43 cm) Diameter Rotor (2000 - 2200 RPM)
- 2.1875 in. (56 mm) Piloted Double Taper Roller Bearings
- Anti Wrap Bearing Protection
- Heavy Duty Bearing Block
- Fixed Displacement Gear; or Variable Displacement Piston Type Motor
- Dual Cross-Over Relief Protection
- Pressure Gauge
- Steel Chain Deflectors
- Synchronous Belt
- Tapered-Lock Sprockets
- Hydraulic Hoses
- Adjustable Shear Bar
- Double Carbide; Quadco Planer Teeth (sharpenable); or Hardened Quadco Teeth
- Replaceable Skid Shoes

Safety First

Safety Alert Symbol

This message alert symbol identifies important safety messages on the machine and in the owner's manual. When you see this symbol, be alert to the possibility of personal injury and carefully read the message that follows.

In the owner's manual and on decals used on the machine the words **DANGER, WARNING, CAUTION, IMPORTANT, and NOTE** are used to indicate the following:

DANGER: This word warns of immediate hazards which, if not avoided, will result in severe personal injury or death. The color associated with Danger is RED.

WARNING: This word refers to a potentially hazardous situation which, if not avoided, could result in severe personal injury or death. The color associated with Warning is ORANGE.

CAUTION: This word refers to a potentially hazardous or unsafe situation that, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices. The color associated with Caution is YELLOW.

IMPORTANT: Highlights information that must be heeded.

NOTE: A reminder of other related information that needs to be considered.

If Safety Decals on this machine are ISO two panel pictorial, decals are defined as follows:

- The first panel indicates the nature of the hazard.
- The second panel indicates the appropriate avoidance of the hazard.
- Background color is YELLOW.
- Prohibition symbols such as and if used, are RED.

Be certain all machine operators are aware of the dangers indicated by safety decals applied to the machine, and be certain they follow all safety decal instructions. Contact Loftness for safety decal replacement.

Loftness cannot anticipate every possible circumstance that may involve a potential hazard. The warnings in this owner's manual are not all inclusive.

Owner's Responsibility

Due to the potential danger of flying debris, it is the owner's responsibility and is "**ABSOLUTELY MANDATORY** that **IMPACT-RESISTANT SHIELDING**" be installed on the machine to protect the operator.

It is **ABSOLUTELY MANDATORY** that all personnel read and follow all safety precautions before operating the machine and attachment.

Make sure that all personnel have read this owner's manual, and thoroughly understand safe and correct installation, operation, and maintenance procedures.

Operate and maintain this machine in a safe manner and in accordance with all applicable local, state, and federal codes, regulations and/or laws; and in compliance with on-product labeling and this owner's manual instructions.

Make sure that all personnel know how to stop the machine and attachment by disengaging all controls. See "Mandatory Shut-Down Procedure" on page 6.

Make sure the attachment is installed on the machine correctly before being placed in service. At regular intervals thereafter, the attachment should be serviced in accordance with procedures outlined in this owner's manual.

Mandatory Shut-Down Procedure

- Stop the machine and attachment on a level surface and lower the attachment to the ground.
- Move throttle to idle position.
- Disengage all power to the attachment.
- Shut off engine and remove the key.

Wait until the rotor has stopped completely before inspecting the attachment.

Safety Rules

These are general safety considerations. Additional precautions may be necessary to operate your machine in a safe manner. Be certain you are operating your machine in accordance with all safety codes, OSHA rules and regulations, insurance requirements and local, state, and federal laws.

- Read and observe all warnings decals on the machine before attempting to operate the attachment. Do not attempt to operate this attachment unless all factory devices and decals are in place. Keep safety decals clean of dirt and grime. Keep all guards, shields and decals in place.
- Remove from area of operation all foreign objects such as bottles, rocks, wire, etc., that might become tangled in the rotor, causing damage to the machine or be thrown striking other objects.
- Do not allow any people and animals within 300 feet of the machine and attachment during operation.
- Do not allow anyone to operate the attachment until he or she has read the owner's manual and is completely familiar with all safety precautions. Keep the work area clear of all unauthorized personnel.
- Do not allow persons under the influence of alcohol, medications, or other drugs that can impair judgment or cause drowsiness to operate or maintain the machine.
- Always use an approved roll bar and seat belt for safe operation. Overturning a machine without a roll bar and seat belt can result in injury or death.
- Use the handholds and step plates when getting on and off the machine to prevent falls. Keep steps and platform cleared of mud and debris.
- Always have an operator in the machine while the attachment is in operation. Never leave the machine and attachment running and unattended.
- Operate the attachment only from the operator's seat.
- Keep your feet on the pedals, (floor plates) seat belt fastened snuggly and seat bar lowered, (if equipped), when operating the attachment.
- The adjustable push bar could contact the machine in some positions. Before starting the power unit, set the push bar in the most forward position, then slowly rotate the attachment back while an assistant checks for clearance. Repeat this process in the other settings to determine which positions are usable with your machine.
- Never attempt to make any adjustments while the attachment is running or the key is in the "ON" position in the machine. Before leaving the operator's position, disengage power to the attachment, shut off engine and remove ignition key.
- Disengage auxiliary hydraulics and place all machine controls in neutral and engage the parking brake before starting the engine.
- Become familiar with and know how to operate all safety devices and controls on the machine and attachment before attempting to operate. Know how to stop the machine and attachment before starting it.
- Repeated impact of the knives with hard objects can cause excessive wear and damage to the skid-loader or attachment. Be sure to maintain recommended ground clearance as specified in this manual.
- Should excessive vibration occur, disengage the auxiliary hydraulics immediately and shut off engine. Do not continue to operate the attachment until the problem has been determined and corrected.
- Do not start, operate, or work on this attachment until you have carefully read and thoroughly understand the contents of this manual and the operator's manual for your machine.

Safety Rules (Cont'd)

- Keep children, bystanders and other workers off and away from the machine and attachment during operation. No riders allowed.
- Before inspecting, cleaning, lubricating, adjusting or servicing any part of the attachment, always exercise the Mandatory Shut-Down Procedure. See "Mandatory Shut-Down Procedure" on page 6. After service has been performed, be sure to restore all guards, shields and covers to their original position.
- Make sure the operator's area is clear of any distracting objects. Keep work areas clean and free of grease and oil to avoid slipping or falling.
- Make sure all controls, (levers, pedals and switches), are in NEUTRAL position before starting the engine.
- Before leaving the operator's position for ANY reason or allowing anyone to approach the machine and attachment, always perform the mandatory shutdown procedure.
- Do not wear loose hanging clothes, neckties or jewelry around rotating parts. Long hair is to be placed under a cap or hat. These precautions will help prevent you from becoming caught in any moving parts on the machine and attachment.
- Before working under the attachment, be certain it is securely blocked!
- Do wear safety glasses, ear protection, respirators, gloves, hard hats, safety shoes and other protective clothing when required.
- Periodically check all guards, shields and structural members. Replace or repair anything that could cause a potential hazard.
- Do not replace components or parts with other than factory-recommended service parts. To do so may decrease the effectiveness of the machine.
- It is the operator's responsibility to be aware of machine and attachment operation and work area hazards at all times.
- Never operate the attachment without adequate light and visibility.
- Keep hands and feet clear! Never step over or climb over the attachment while the rotor is engaged or the engine is running; entanglement could occur.
- Operators are responsible to know the location and function of all guards and shields including but not limited to belt drives and rotor. Operators are responsible to make certain that all guards are in place when operating the machine and attachment.
- Operators are responsible to be aware of safety hazard areas and follow instructions on warning, caution, or danger decals applied to the machine.
- Know the area before operating the machine. Be aware of power lines or other equipment.
- Do not lubricate parts while the machine is running.
- Do not smoke while servicing the machine.

Hydraulic Safety

- The hydraulic system is under high pressure. Make sure all lines and fittings are tight and in good condition. These fluids escaping under high pressure can have sufficient force to penetrate skin and cause serious injury.
- Never check for leaks by using any part of your body to feel for escaping fluid.

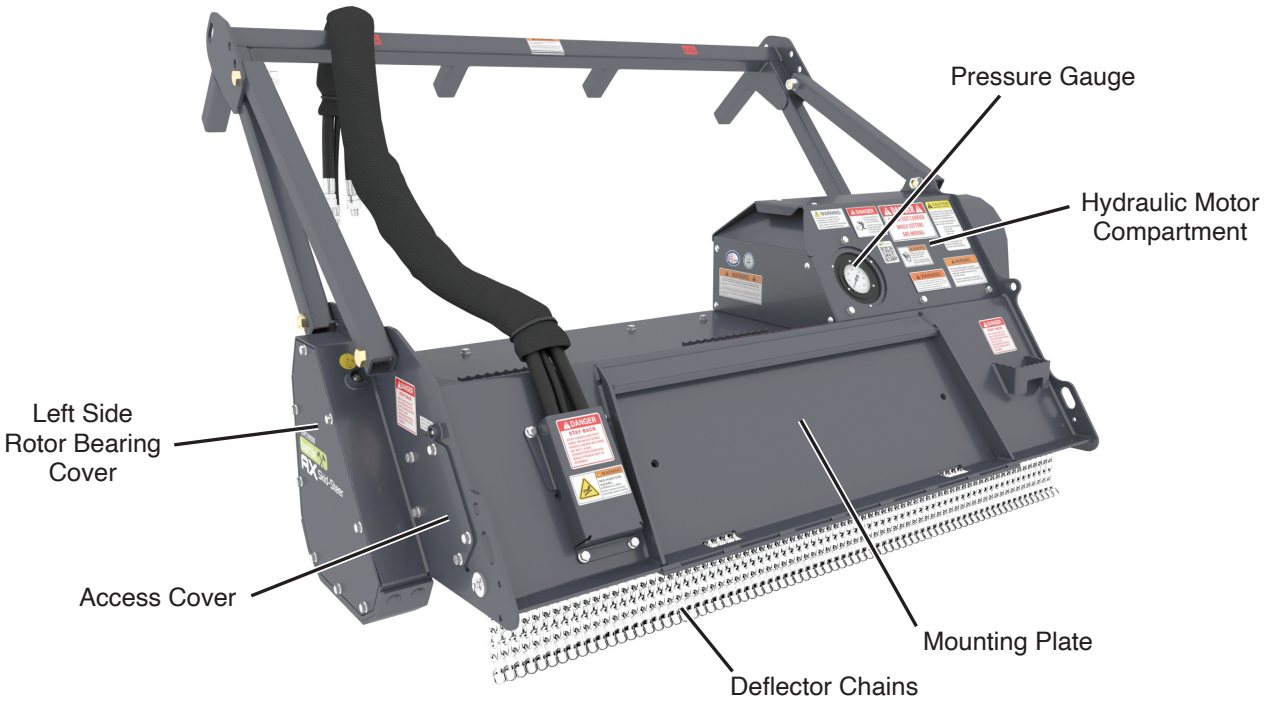
⚠	**WARNING:** *Contact with high pressure fluids may cause fluid penetration and burn hazards. Fluid that is under pressure can penetrate body tissue. Fluid penetration can cause serious injury and possible death. If fluid is injected into the skin, seek medical attention immediately!*

California Proposition 65 Warning

⚠	**WARNING:** *This product can expose you to Mineral Oil, which is known to the State of California to cause cancer. For more information, go to www.p65warnings.ca.gov.*

A decal with this warning statement is adhered to the machine. If the decal should become worn or missing, replace immediately

Battle Ax Skid Loader Identification



Safety Decal Locations

Check and replace any worn, torn, hard to read or missing safety decals on your machine.

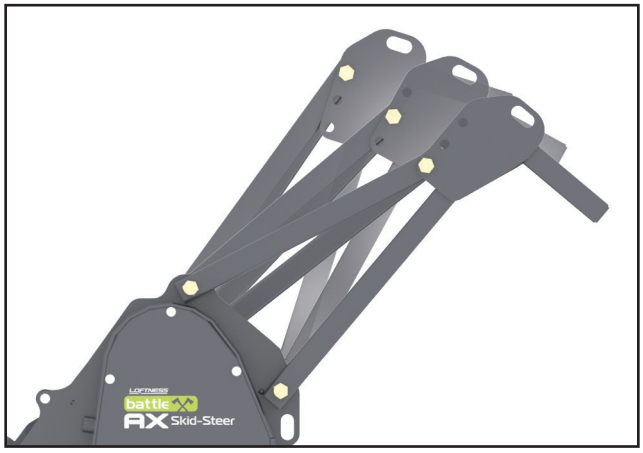
LOFTNESS

Pusher Bar Assembly

The Battle Ax is shipped with the pusher bar in an upright position. Follow the procedure below to get the machine into the operating position.



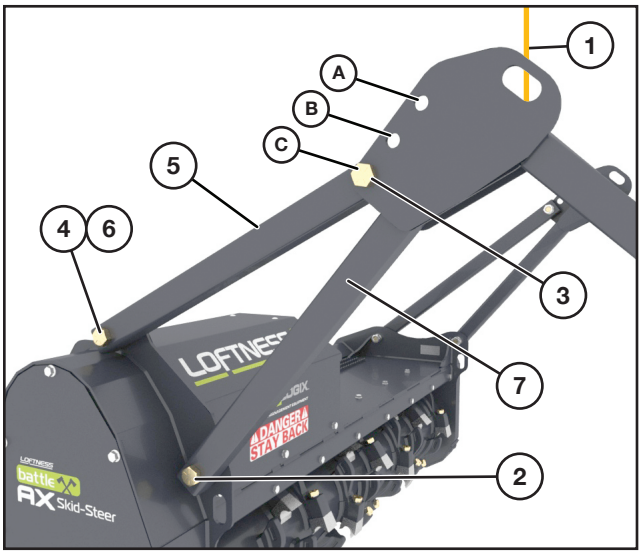
The pusher bar can be set into one of three different operating positions as shown above. Determine which of the three positions is desired before assembling.

NOTE: *Assembling the pusher bar requires two people and the use of an approved lifting device (1) to support the push bar as it is being adjusted.*

Ensure the pusher bar is being safely supported.

Loosen nuts at locations (2 and 3).

Remove the nut, bolt, and washer at location 4 that secures the arm (5) to the frame during shipping. Repeat the procedure on the other side.



Move arm (5) into position so the hole in the lower end of the arm aligns with the operation hole (6) of the side plates on the frame (indicated by the shipping tag). Remove the shipping tag.

NOTE: *The pusher bar is factory-set so the upper hole in each arm aligns with hole "C". Repositioning the upper hole in the arms to another hole (A or B) in the sides of the pusher will provide a different angle for the pusher bar during operation. If a different hole position is desired follow the procedure below.*

Adjusting the pusher bar requires two people and the use of an approved lifting device (1) to support the pusher bar as it is being adjusted.

Remove the nut, bolt, and washer at location 3 from the bottom hole of the pusher side and upper hole of the arm. Once the hardware is removed, let the arm (5) rest on the pusher bar side assembly (7). Then loosen the nut at locations 2 and 4. Repeat the procedure on the other side.

Using the hoist, adjust the angle of the pusher bar while simultaneously positioning one of the arms until the upper hole in the arm aligns with the desired hole in the side of the pusher.

NOTE: *A punch may be needed to assist with alignment.*

(Procedure continued on following page.)

Pusher Bar Assembly (Cont'd)

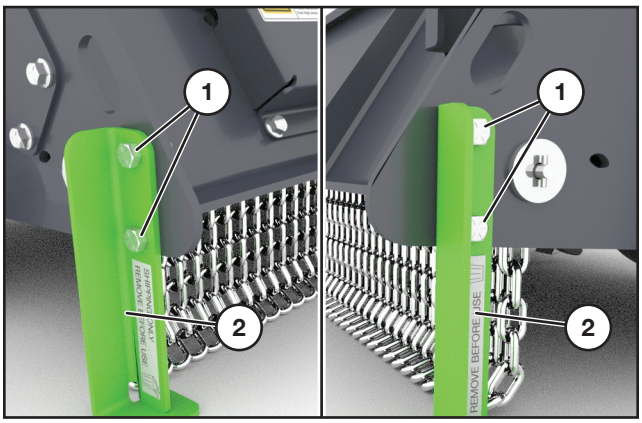
Reinstall the hardware in the correct order and hand-tighten.

Move the opposite arm into place so the upper hole aligns with the corresponding hole position as the opposite side. Reinstall the hardware in the correct order.

Tighten all hardware on both sides.

The strap/chain from the hoist can now be removed.

Removing Shipping Stands

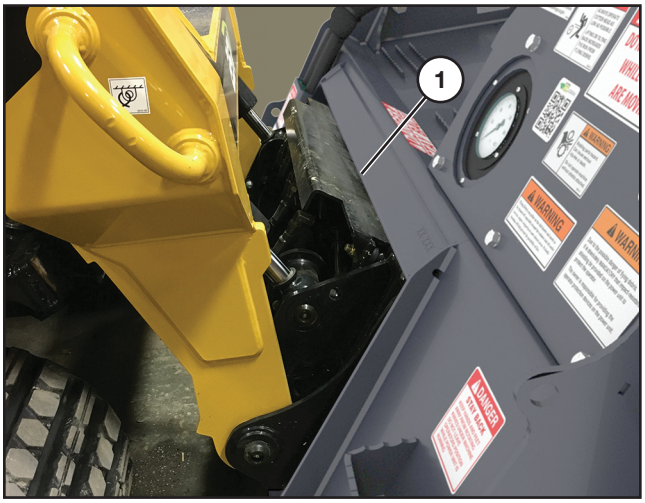


Unfasten the bolt, washer, and nut sets (1) (two sets on each side) and remove the shipping stands (2).

NOTE: *Do not discard the shipping stands. They are used to stabilize the Battle Ax during storage. Keep in a secure location until ready to store.*

Installing the Battle Ax to the Loader

Fully raise the attachment-locking levers on the loader mounting plate.



Tilt the loader mounting plate ahead. Drive forward with the loader and hook the top edge of the loader mounting plate under the top flange (1) on the Battle Ax mounting plate. Be careful not to damage the locking levers on the loader mounting plate.

Tilt the loader mounting plate back until the Battle Ax mounting plate is firmly against the loader mounting plate, but Do Not lift the attachment off the ground.

⚠	**WARNING:** *Before you leave the operator's seat: Lower the lift arms, put the attachment on the ground. Stop engine and remove ignition key. Engage the parking brake.*

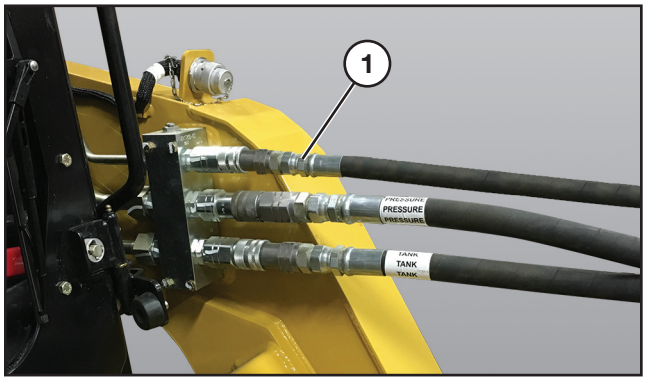
Fully lower the attachment-locking levers on the loader mounting plate.

⚠	**WARNING:** *Locking-wedge pins must extend through the holes in attachment-mounting plate. Levers must be fully down in the locked over-center position. Failure to secure wedge pins can allow attachment to come off, causing serious injury or death.*

Installing the Battle Ax to the Loader (Cont'd)

Hydraulic Connections

⚠	**WARNING:** *Hydraulic Lines. Protect hands and body from high pressure fluids. Pressurized fluids can penetrate the skin. Disconnect and lock out power source before disconnecting and/or connecting hydraulic hoses.*



NOTE: *The hydraulic hose quick couplers shown above are not supplied with the Battle Ax.*

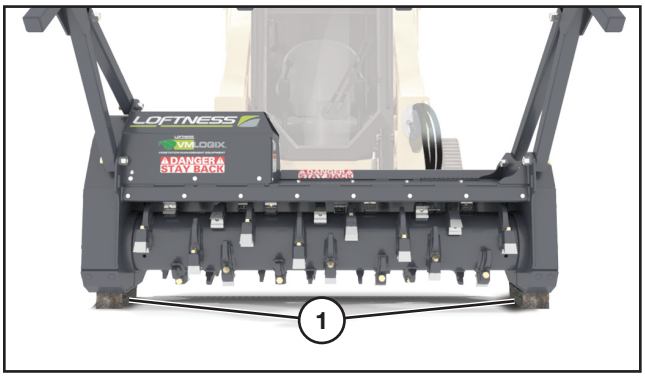
Install the Battle Ax quick couplers to the loader.

NOTE: *The case drain quick coupler (1) of the Battle Ax must be connected to the loader's auxiliary hydraulic system for proper operation of the Battle Ax.*

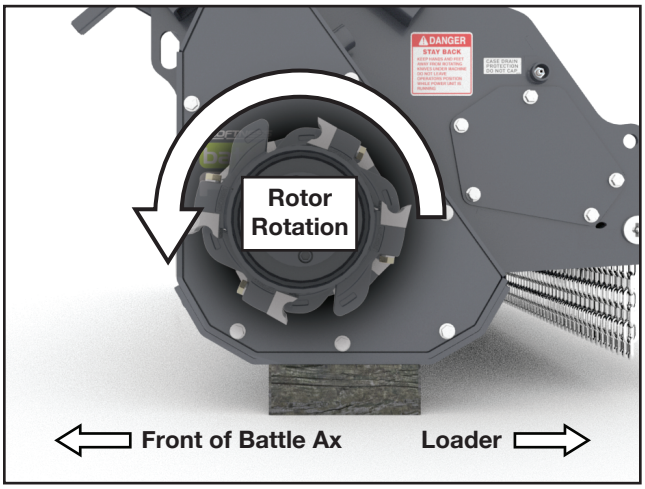
IMPORTANT: *It is the owner's responsibility to assure that the hydraulic hoses from the power unit to the attachment are not caught in pinch points, or in any way damaged by moving parts.*

Checking Rotor Rotation

⚠	**DANGER:** *Keep hands, feet, and clothing clear of rotor and bearings while the loader is running.*



Raise the Battle Ax off the ground and place blocks (1) underneath the skids. Lower the Battle Ax down on the blocks.



Engage the loader auxiliary hydraulics, the rotor should start rotating in a forward direction. The rotation should be counterclockwise as viewed from the left side of the Battle Ax.

NOTE: *If the rotor is rotating backward, reverse the quick couplers (not supplied) on the Battle Ax hydraulic hoses. Re-install the couplers (not supplied) on the loader and test for correct rotor rotation.*

⚠	**WARNING:** *The Battle Ax can be damaged if rotor is operated in reverse rotation.*

NOTE: *Keep the Battle Ax on the blocks for checking the rotor speed. See next procedure for instructions.*

Checking Rotor Speed

⚠	**DANGER:** *Shut down power from the loader before removing the belt cover and applying reflective tape to the sprocket. Keep the Battle Ax skids on blocks for this procedure.*

Remove the belt cover. See “Removing Belt Cover” on page 21 for instructions.

Apply a small piece of reflective tape (1) to the outer edge of the lower sprocket.

Start the loader and engage the auxiliary hydraulics.

⚠	**DANGER:** *Keep hands, feet, and clothing clear of the rotor, belt, and sprockets while the loader is running.*

Point an electronic (photo) tachometer (2) towards the edge of the sprocket to check the rotor speed.

NOTE: *The tachometer is not supplied with the Battle Ax.*

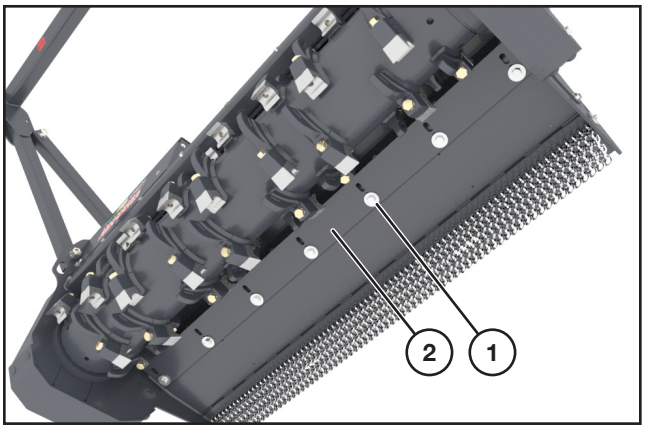
Test the rotor RPM with the loader engine at full throttle.

Shut down the loader when done.

See “Motor & Sprocket Selection Chart” on page 29 for rotor RPM. If it is outside this recommended range, it may be necessary to disconnect the Battle Ax and test the hydraulic output of the loader with a flow meter to see if it corresponds with the factory specifications.

Turn power off from loader and return the belt cover to position, securing with the eight bolts.

Cutter Bar Adjustment/Removal



NOTE: *The cutter bar can be adjusted back or forward to increase or decrease the distance between the bar and the rotor.*

Most operators find the best performance is achieved by adjusting the cutter bar as close as the slots will allow (approximately a 1/4" gap from knife to cutter bar). A wider gap generally increases finished partical size and horsepower requirements.

⚠	**WARNING:** *Shut down and disconnect hydraulic hoses from skid loader before adjusting the cutter bar.*

Loosen the seven bolts with washers (1) securing the cutter bar (2) to the frame. Move the cutter bar either forward or back making sure the distance moved is consistent through the entire length of the cutter bar. Retighten bolts. Torque to 165 ft.-lbs.

Over time, the cutter bar edge will become worn and rounded from use. There are a total of 4 wear edges available by removing and flipping the bar, side to side and front to back.

⚠	**CAUTION:** *If adjusting the cutter bar after the machine has been used, the cutter bar should be completely removed to clear any debris away from contact surfaces before assembly and tightening. FAILURE TO DO SO COULD RESULT IN SEVERE DAMAGE TO THE MACHINE!*

Getting Started

For best results, the areas to be mowed should be free of debris such as bottles, metal objects, rocks and wire etc. The teeth cut and pulverize the brush, grass and weeds.

Operate the Battle Ax as low to the ground as possible without the teeth striking ground or other obstructions. Because of the high speed of the teeth, the life of the teeth will be reduced if it is operated in rocky terrain or in areas where many obstacles are present. The Battle Ax deposits cut material over the entire width-of-cut, which eliminates bunching or windrowing behind the machine.

WARNING: *Due to the potential danger of flying debris, it is the owner's responsibility and is "ABSOLUTELY MANDATORY that IMPACT-RESISTANT SHIELDING" be installed on the machine to protect the operator.*

WARNING: *Lifting or tilting the Battle Ax increases the risk of flying debris.*

DANGER: *Keep hands and feet out! Do not step on or climb over the unit while machine is in operation, or engine is running. Do not carry passengers.*

WARNING: *Do not operate the attachment above the rated RPM. Check with your Loftness dealer to be sure your attachment is set-up with the correct hydraulic motor to match the hydraulic flow GPM (Gallons Per Minute) of your machine.*

WARNING: *Flying debris can gather on the loader and needs to be cleaned off, especially around the radiator, oil cooler screens, engine compartment, and exhaust areas. Periodic cleaning will help prevent the possibility of fire.*

DANGER: *DO NOT allow ANY people or animals within 300 feet of the work area while operating this machine.*

Operation

WARNING: *Always stop engine and remove key before leaving operators seat.*

Tilt attachment mounting frame back and raise the Battle Ax slightly above the ground when moving the machine.

NOTE: *Operate the Battle Ax as low to the ground as possible without the teeth striking ground or other obstructions.*

WARNING: *Lifting or tilting the Battle Ax increases the risk of flying debris.*

Lower mulching head so skids are on ground.

Set engine speed to low idle and engage the mulching head.

Slowly increase engine speed to high idle.

Move the loader and Battle Ax forward and begin mowing.

NOTE: *Various mowing conditions, and desired finished cut appearance, will determine proper ground speed.*

Operating Tips

To reduce rotor jams, approach brush and trees at a slow speed.

When operating the mulching head near the ground, keep as low to the ground as possible without the teeth striking ground or other obstructions.

NOTE: *Because of the high speed of the rotor, the life of the teeth will be reduced if it is operated in rocky terrain or in areas where many obstacles are present.*

Clearing Jams

If the rotor stalls, or gets jammed with debris, stop rotor and raise slightly. Start rotor again to free debris

⚠	**WARNING:** *Do not attempt to dislodge jams by hand while the loader is running. Shut down and lock out power from the loader before attempting to remove debris by hand.*

Log Moving

Disengage hydraulic power to rotor before moving logs and brush with pusher bars.

Raise the loader lift arms and tilt the Battle Ax forward until the push bar extensions are over the log or item being moved. Lower the lift arms and position the log between push bar extensions and the Battle Ax. Move the loader backwards, dragging the log to the desired location.

Hydraulic Hose Storage

When not in use, drape the hydraulic hoses over the pusher bar and protect the hose couplers. Do not allow the couplers to come in contact with the ground, foliage, or any other machinery.

General Maintenance

To ensure efficient operation, you should inspect, lubricate, and make necessary adjustments and repairs at regular intervals. Parts that are starting to show wear should be ordered ahead of time, before a costly breakdown occurs and you have to wait for replacement parts. Keep good maintenance records, and adequately clean your Battle Ax after each use.

Proper lubrication is important. Too little lubricant will cause premature failure of a bearing. Too much lubrication usually causes high operating temperature and early failure of seals. Follow all lubrication instructions and schedules included in this section.

Maintenance Schedule

HOURS	SERVICE POINTS	SERVICE REQUIRED					
		CHECK	CLEAN	CHANGE	GREASE	ADJUST	OIL
Every 8	Machine		X				
	Loose Bolts					X	
	Hoses and Wiring	X					
	Oil Leaks	X					
	Rotor Bearing				X		
	Teeth	X					
Every 100	Belt Tension	X					
	Drive Belt	X					
	Safety Labels	X					
Every 500	Overhung Load Adapter	X					X

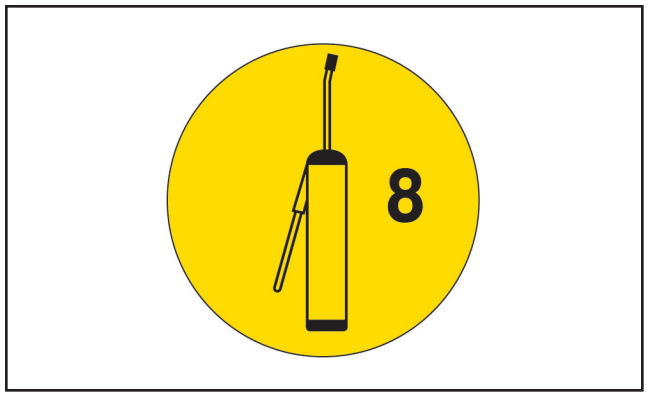
Lubrication

Grease Points Location

Use a #2 general purpose lithium based grease unless noted otherwise.

NOTE: *Replace any broken or missing grease fittings. Be sure to clean fittings before greasing.*

⚠	**DANGER:** *Shut down and lock out power from the loader before lubricating the Battle Ax. Failure to do so could result in serious injury or death.*



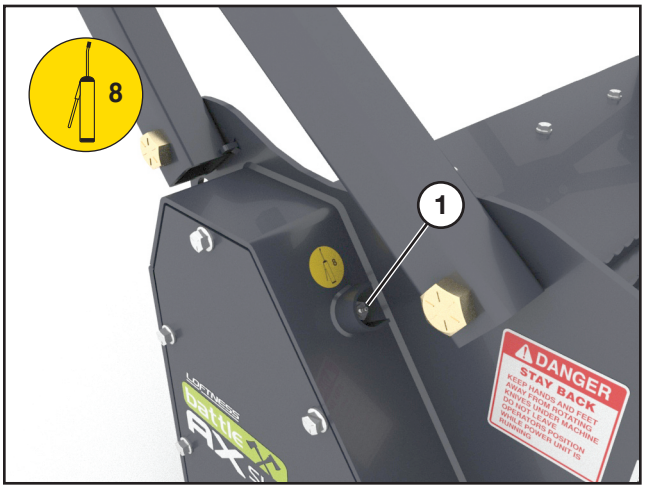
NOTE: *Lubricate the grease point every "X" hours indicated on the decal adjacent to the grease point.*

See "Battle Ax Skid Loader Identification" on page 8 for component location and identification.

(Procedure continued on following page.)

Lubrication (Cont'd)

Grease Points Location (Cont'd)



Location: Left side rotor bearing (1).
Interval: Every 8 hours of operation.

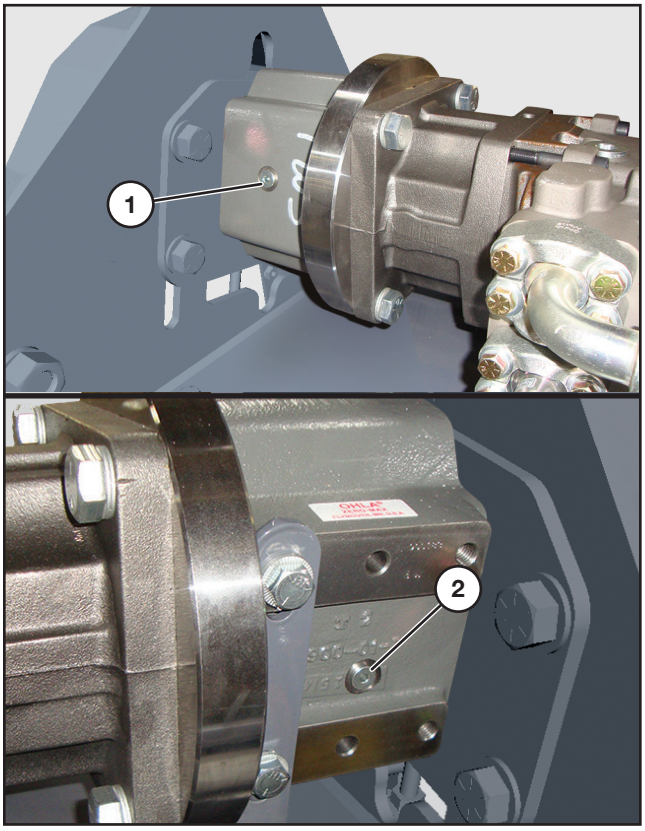
NOTE: *Rotor bearings cannot be damaged by over-greasing. Lubricate the fittings until a small amount of grease is purged from the bearing.*

Location: Right side rotor bearing (2).
Interval: Every 8 hours of operation.

NOTE: *Rotor bearings cannot be damaged by over-greasing. Lubricate the fittings until a small amount of grease is purged from the bearing.*

Overhung Load Adapter

The motor cover must be removed to access the overhung load adapter. Refer to "Removing Motor Cover" on page 22 for instructions.



Remove the plug from the upper port (1) located on front side of the overhung load adapter, and the plug from the lower port (2) located on the back side.

Using a funnel, add hydraulic oil into the upper port (1) until it runs out through the bottom port (2).

- Approximately 6 oz. for OHLA (N51193) - variable motor system.
- Approximately 4 oz. for OHLA (205079) - fixed motor system.

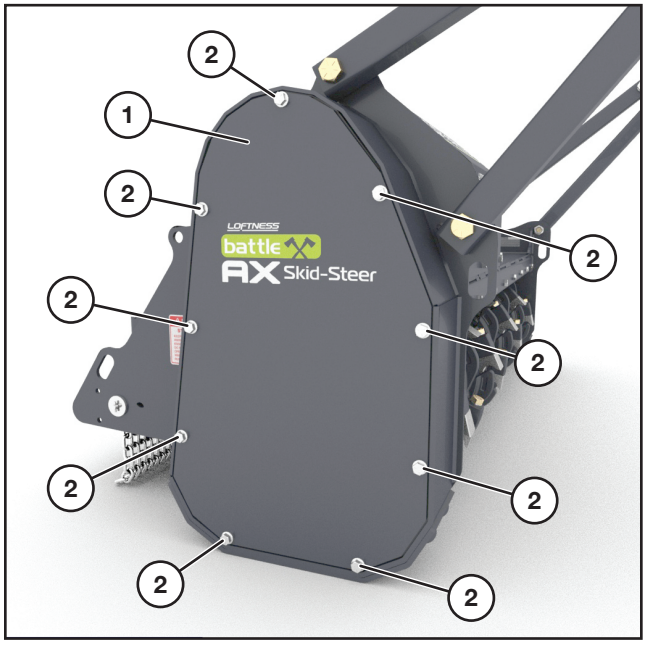
Reinsert the plug back into the lower port and tighten.

Return the remaining plug back into the upper port and tighten.

NOTE: *If replacing bearings or seals in the overhung load adapter, be certain to refill with hydraulic fluid after reassembly.*

Removing Belt Cover

⚠	**DANGER:** *Shut down power from the loader before removing the belt cover. Failure to do so could result in serious injury or death.*



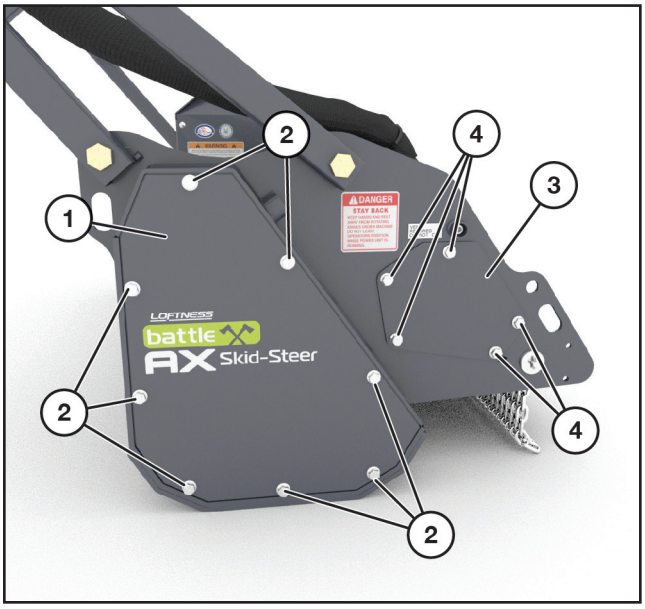
⚠	**CAUTION:** *The cover is heavy. Support the cover when removing.*

To remove the cover (1), unscrew the nine bolts (2) and lift the cover off of the frame.

When maintenance/repairs are complete, return the cover(s) back into position and tighten and secure all bolts.

Removing Rotor Bearing Cover and Valve Access Cover

⚠	**DANGER:** *Shut down power from the loader before removing the covers. Failure to do so could result in serious injury or death.*



To remove the rotor bearing cover (1), unscrew the eight bolts (2) and lift the cover off of the frame.

To remove the left side valve access cover (3), unscrew the five bolts (4) and lift the cover off of the frame

When maintenance/repairs are complete, return the cover(s) back into position and tighten and secure all bolts.

Removing Motor Cover

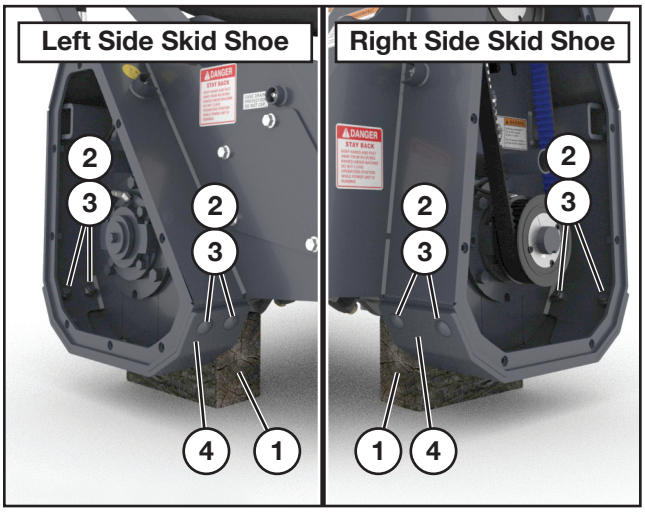
⚠	**DANGER:** *Shut down power from the loader before removing the motor cover. Failure to do so could result in serious injury or death.*

Remove the 3 bolts (1) on the front of the motor cover (2) followed by the four bolts (3) at the rear. Use the handle (4) to left the cover off of the machine.

When maintenance/repairs are complete, return the cover(s) back into position and tighten and secure all bolts.

Skid Removal/Replacement

⚠	**DANGER:** *Shut down power from the loader before removing the skids. Failure to do so could result in serious injury or death.*



Lift the Battle Ax off of the ground about 6 inches. Place blocks (1) under the rotor (not under teeth) to support the Battle Ax when lowered. DO NOT place blocks under the skids.

For right side skid shoe, first remove the belt cover. Refer to "Removing Belt Cover" on page 21 for instructions.

For left side skid shoe, first remove the bearing cover. Refer to "Removing Rotor Bearing Cover and Valve Access Cover" on page 21 for instructions.

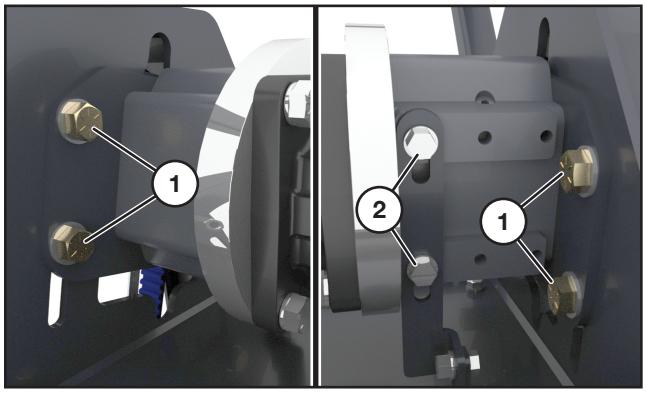
Remove the nuts (2) and slide the carriage bolts (3) out. Lower the skid (4) and remove.

To install a new skid shoe, align the holes in the skid shoe with the holes on frame. Re-install the bolts, add the nuts and tighten securely.

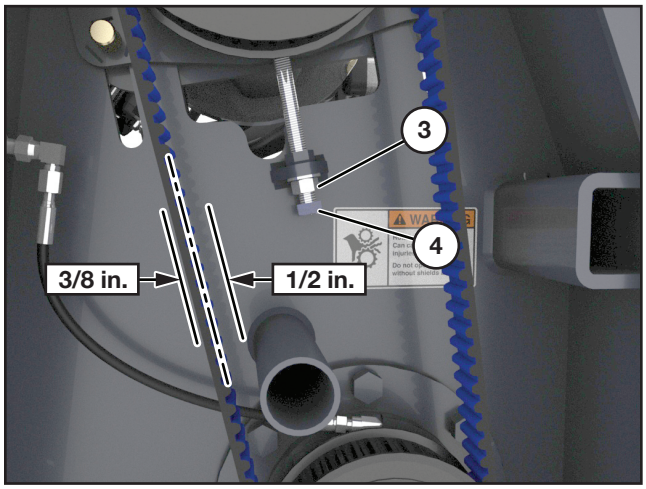
Belt Tension Adjustment

DANGER: *Shut down and lock out power from the loader before adjusting the drive belt. Failure to do so could result in serious injury or death.*

Remove belt cover and motor cover. Refer to “Removing Belt Cover” on page 21 and “Removing Motor Cover” on page 22 for instructions.



Loosen the four mounting bolts (1). Then loosen the overhung load adapter support bracket bolts (2).



Loosen the jam nut (3). Then turn the hex bolt (4) to either increase or decrease belt tension.

Belt should move no more than 3/8 in. (9.5 mm) to the left, and no more than 1/2 in. (12.7 mm) to the right when pressure applied at the midpoint.

Retighten the jam nut (3).

Retighten overhung load adapter support bolts (1) and the mounting bolts (2).

Replacing Belt

To replace the belt, follow the procedures for “Belt Tension Adjustment” preceding this subsection and decrease the belt tension additionally to allow the belt to slide over the top sprocket.

NOTE: *When replacing or installing a new belt, align the grooves in the belt with the upper and lower pulleys.*

Install the belt and adjust the tension accordingly. Refer again to the “Belt Tension Adjustment” procedure and follow the instructions completely.

Sprocket Removal

The steps to remove either the upper or lower sprocket are identical. For this procedure the upper sprocket is discussed. Follow the same procedure to remove the lower sprocket.

NOTE: *See page 40 for a master drawing of all belt/sprocket combinations. The page provides a reference to an exploded view with a complete parts list for each combination.*

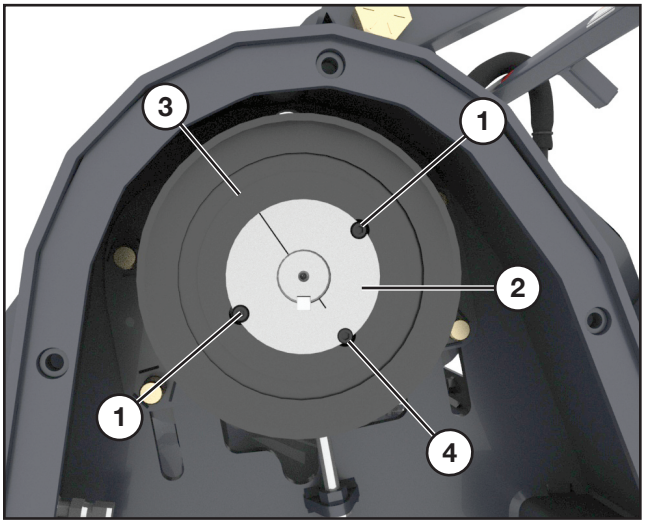
1. Disconnect or turn off all power to the Battle Ax.

DANGER: *Shut down and lock out power from the loader before removing sprockets. Failure to do so could result in serious injury or death.*

Remove the drive belt by following the instructions in “Belt Tension Adjustment” and “Replacing Belt” preceding this subsection.

(Procedure continued on following page.)

Sprocket Removal (Cont'd)



2. Remove the two screws (1) from the taper lock bushing (2) of the sprocket (3).
3. Insert one of the screws into the threaded hole (4).
4. Tighten the screw until bushing grip is released. (If excessively tight, lightly hammer face of sprocket using drift pin or sleeve).

NOTE: *Never hit sprocket directly with hammer.*

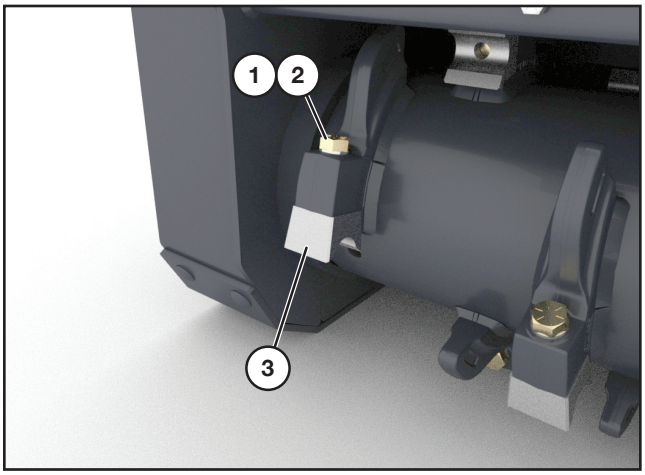
5. Replace the sprocket by cleaning the shaft, bore of bushing, outside of bushing and hub bore of all oil, paint and dirt. File away any burrs.
6. Insert bushing into hub. Match the hole pattern, not threaded holes (each complete hole will be threaded on one side only).
7. Apply a thread-locking compound to screws and thread into the two opposing holes.
8. Position assembly on shaft and alternately torque screws to 35 ft.-lbs.
9. To increase gripping force, hammer face of bushing using drift or sleeve.

NOTE: *Do not hit bushing directly with hammer.*

10. Re-torque screws after hammering.
11. Recheck screw torque after initial run-in, and periodically thereafter, repeat steps 4, 5 & 6 if loose.
12. Check alignment of the sprocket. Repeat sprocket removal and assembly procedures if necessary.

Tooth Removal and Installation

Quadco Teeth



Remove the bolt and washer (1 and 2) and tooth (3).

Use copper based anti-seize when reinstalling the bolts. Torque to 240 ft.-lbs.

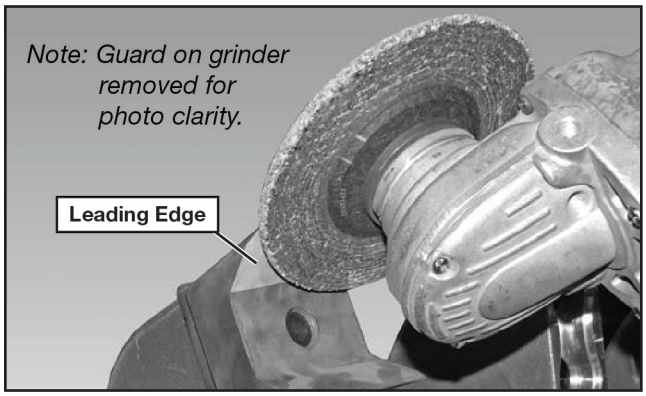
IMPORTANT: *When a damaged tooth is replaced, the tooth directly opposite (180 degrees) must be replaced at the same time to retain balance.*

Tooth Sharpening (Quadco)

NOTE: *The teeth need to be kept sharp to maintain the most effective operation of the attachment. Daily inspection and touch up is recommended.*

NOTE: *The teeth can either be removed from the attachment or remain installed for sharpening.*

⚠	**WARNING:** *Rotor must be stabilized to prevent accidental rotation any time the rotor is exposed for service work.*

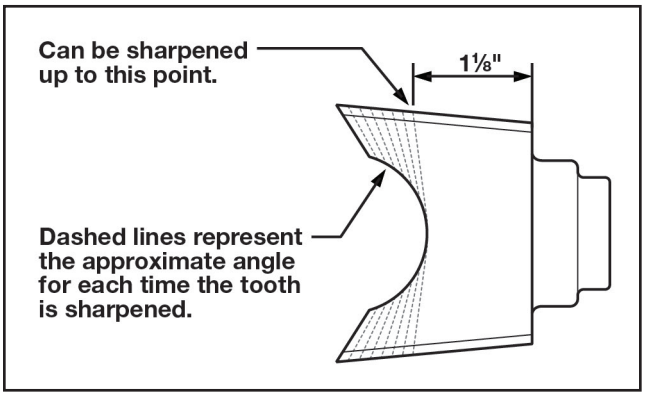


NOTE: *The Quadco cutter teeth have been heat treated to a specific hardness. Care must be taken to avoid overheating the leading edge of the tooth while sharpening. If the coloring in the tooth changes to either a blue or brown during the sharpening, you have removed the temper and the tooth will not hold it's cutting edge.*

NOTE: *When re-sharpening teeth using machine shop equipment, avoid overheating the teeth by using a flood coolant system.*

NOTE: *When re-sharpening teeth using a hand grinder, avoid overheating the tooth by lightly grinding each tooth, moving across the entire row of teeth before returning to the first tooth to repeat the procedure.*

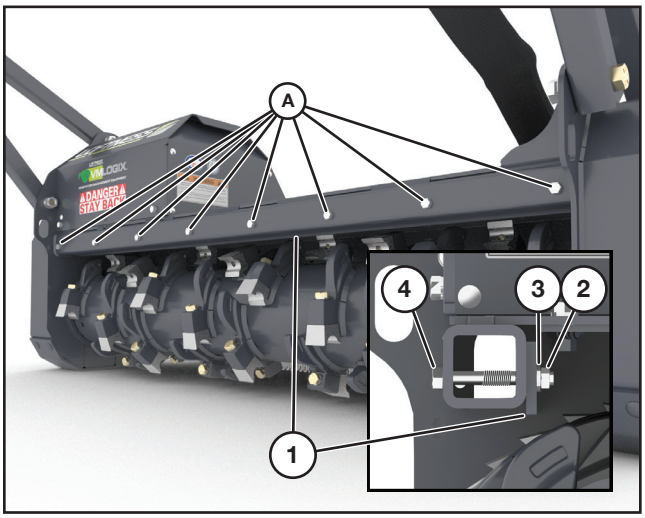
NOTE: *Sharpen each tooth equally to maintain rotor balance. Always return tooth to it's original location if it is removed from the rotor for sharpening.*



NOTE: *It is not necessary to match the factory angle on the underside of the cutting edge when re-sharpening. Sharpen each tooth at a slight angle for each successive sharpening (represented by the dashed lines shown in the illustration above). When the cutting edge of the tooth is 1-1/8 in. from the back side of the tooth, the tooth must be replaced.*

Recutter Removal/Replacement

DANGER: *Shut down power from the loader before removing and replacing the recutter. Failure to do so could result in serious injury or death.*



NOTE: *Mounting hardware for the recutter is shown at the locations above (A). There are seven hardware locations for the 61" Battle Ax, and eight locations for the 71" Battle Ax.*

To remove the recutter (1), unfasten all hardware shown at locations “A” - the 1/2" nuts (2), 1/2" washers (3), and the 4" bolts (4). Support the recutter before removing the last two bolts.

Over time, the recutter edge will become worn and rounded from use. There are a total of 4 wear edges available by removing and flipping the bar, side to side and front to back.

CAUTION: *If adjusting the recutter after the machine has been used, the recutter should be completely removed to clear any debris away from contact surfaces before assembly and tightening. FAILURE TO DO SO COULD RESULT IN SEVERE DAMAGE TO THE MACHINE!*

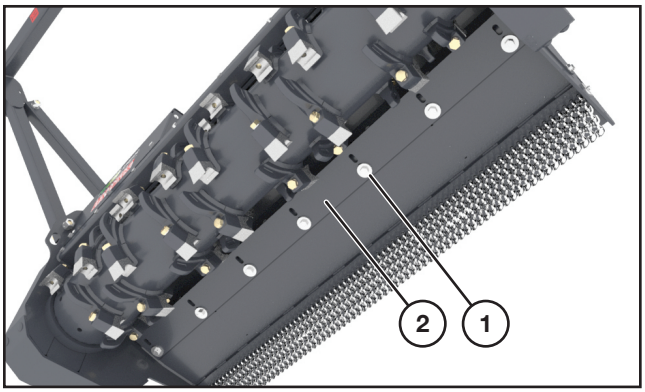
To install the clean or new recutter, align the holes in the recutter with the holes on the frame. Re-install the bolts, then add the washers and nuts. Torque to 83 ft.-lbs.

Installing/Removing the Hood Liner

DANGER: *Shut down power from the loader before installing or removing the hood liner. Failure to do so could result in serious injury or death.*

Clearing the Cutter Bar

For a new or unused machine:



Loosen (do not remove) the hardware (1) securing the cutter bar (2) (seven securing locations).

This will provide enough room to mount the hood liner without removing the cutter bar.

For a machine that has already been used or put into service:

IMPORTANT: *Over time, a Battle Ax put into service will collect dirt, debris, and other matter on and around the cutter bar and the recutter. For this reason it is important that both are completely removed and all contact surfaces cleaned before it can be returned to the machine.*

To remove the cutter bar, see “Cutter Bar Adjustment/ Removal” on page 16 for complete and thorough instructions. To remove the recutter, see “Recutter Removal/Replacement” on this page. Obey all cautions and warnings described in each procedure.

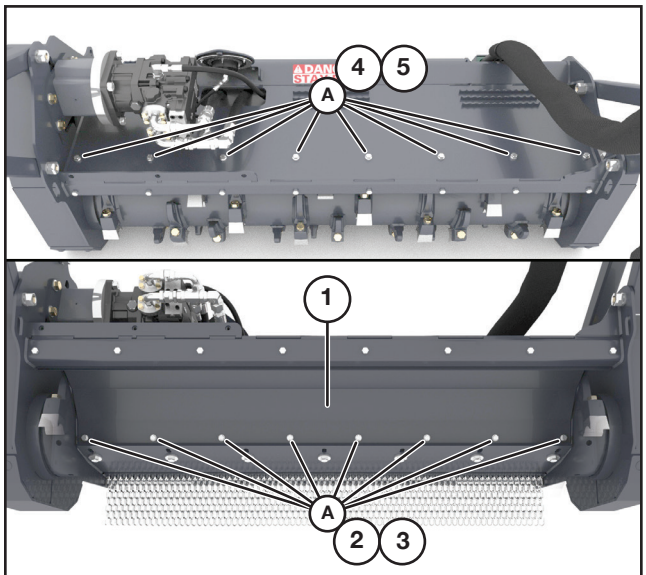
CAUTION: *The cutter bar must be completely removed to clear any debris away from contact surfaces before assembly and tightening. FAILURE TO DO SO COULD RESULT IN SEVERE DAMAGE TO THE MACHINE!*

(Procedure continued on following page.)

Installing/Removing the Hood Liner (Cont'd)

Mounting the Hood Liner

Remove the motor cover to access some hardware locations that are used to secure the hood liner. Refer to "Removing Motor Cover" on page 22 for instructions.



NOTE: Rotor partially hidden in this image for clarity. The rotor does not need to be removed to install or remove the hood liner.

NOTE: *Before installing the hood liner, remove the factory-installed hardware shown at the locations above (A). This hardware is no longer used.*

There are fourteen hardware locations for the 61" Battle Ax, and sixteen locations for the 71" Battle Ax.

Clean the rotor chamber as well as all hardware locations shown above.

Place the hood liner (1) into position, then align the holes in the hood liner with the threaded holes in the frame made available after removing the factory-installed hardware.

Install the supplied 1-3/4" bolts (2) with 1/2" washers (3) through the back of the liner and into the threaded holes on the frame. Then install the 1-1/4" bolts (4) with 1/2" washers (5) through the top of the frame and into the weld nuts on the hood liner. Tighten securely.

Retightening/Reinstalling the Cutter Bar and Recutter

If the hood liner was installed onto a new or unused Battle Ax, retighten all hardware securing the cutter bar.

If the hood liner was installed onto a Battle Ax that has been used or already put into service, make sure all contact surfaces on the cutter bar, the recutter, and on the Battle Ax have been thoroughly cleaned and are clear of debris.

Remount the cutter bar. See "Cutter Bar Adjustment/ Removal" on page 16 for installation instructions.

Remount the recutter. See "Recutter Removal/ Replacement" on page 26 for installation instructions.

Storage

End of Season

- Clean entire Battle Ax thoroughly.
- Clean belt and sprockets, relax the belt tension.
- Lubricate all parts of the machine. See “Lubrication” on page 19.
- Make a list of all worn or damaged parts and replace them.
- Paint all parts that are worn or rusted.
- Store Battle Ax in a clean, dry area.
- Review the Battle Ax operator’s manual.
- Secure hydraulic hoses in storage position. See “Hydraulic Hose Storage” on page 18.

Beginning of the Season

- Review the Battle Ax operator’s manual.
- Lubricate all parts of the machine. See “Lubrication” on page 19.
- Tighten all bolts, nuts, and set screws. See “Torque Specifications” on page 91.
- Adjust belt tension. See “Belt Tension Adjustment” on page 23.
- Replace all damaged, worn or missing decals.
- Install the Battle Ax on a loader and test for proper operation.

⚠	**WARNING:** *DO NOT allow ANY people or animals within 300 feet of the work area while operating this machine.*

Troubleshooting

PROBLEM	CAUSE	SOLUTION
Excessive Vibration	Broken or missing teeth.	Replace teeth.
	Mud and/or debris wrapped around the rotor.	Clean the Battle Ax.
	Faulty drive line bearing.	Replace bearing(s).
	Faulty rotor bearing.	Replace bearing(s).
	Damage to rotor (includes bent end of shafts, missing balance weights, or actual rotor deformity from striking rocks, etc.)	Consult factory.
Uneven Cutting	Teeth dull or worn excessively.	Replace teeth.
	Engine RPM too slow.	Adjust machine RPM to full throttle.
	Travel speed too fast.	Reduce ground speed.
Rotor Will Not Turn	Faulty drive line bearing.	Replace bearing(s).
	Faulty rotor bearing.	Replace bearing(s).
	Belt damaged.	Replace belt.
	Belt slipping.	Clean or replace belt.
		Adjust tension.
Oil Leak At Hydraulic Control Valve Cover.	Pinched case drain hose.	Check hose.
	Disconnected case drain hose.	Reconnect hose.

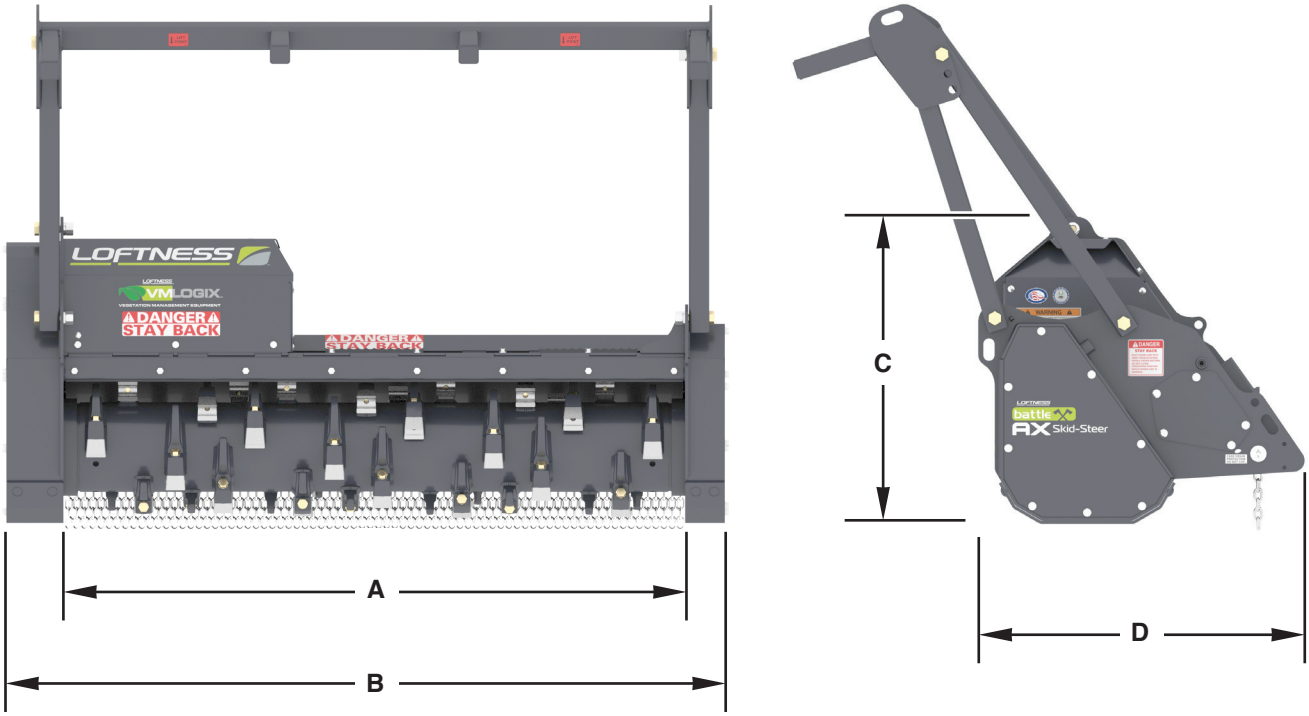
LOFTNESS

Specifications

DESCRIPTION	BATTLE AX SKID LOADER
Cutting Width	61 in. (154.9 cm)
	71 in. (180.3 cm)
Operating Capacity	6 in. (15.2 cm) Continuous
	10 in. (25.4 cm) Intermittent
Capacity Monitor	Pressure Gauge
Motor	Variable Displacement or High Pressure Gear
Rotor Bearing	2.1875 in. Piloted Double Taper
Rotor Tip Diameter	17 in. (43.2 cm)
Sprockets	Taperlock
Belt	14 mm x 20 Synchronous
	14 mm x 37 Synchronous
Mount	Universal Skid Type
Shear Bar	Adjustable
Pusher Bar	Adjustable Rigid Bar
Knives	Double Carbide Teeth
	Quadco Planer Teeth, Sharpenable (Optional)
	Quadco Planer Teeth Hardened (Optional)
Skid Shoes	Fixed - Replaceable
Deflector	Steel Chain
Anti-Wrap Protection	Bearing

Dimensions



DESCRIPTION	BATTLE AX SKID LOADER	
	61	71
Cutting Width (A)	61 in. (155 cm)	71 in. (180.3 cm)
Overall Width (B)	79.1 in. (200.9 cm)	89.1 in. (226.3 cm)
Operating Height (C)	37.6 in. (95.5 cm)	37.6 in. (95.5 cm)
Overall Length (D)	40.0 in. (101.6 cm)	40.0 in. (101.6 cm)
Number Of Knives	30	36
Weight	2604 lb. (1181.2 kg)	2841 lb. (1288.7 kg)
Crated Weight	2831 lb. (1284.12 kg)	3088 lb. (1400.7 kg)
